AN INTRODUCTION TO NETWORK CENTRIC WARFARE

FIRST EDITION

Air Power Australia 2008

National Library of Australia Cataloguing-in-Publication entry

Author: Kopp, Carlo, 1958-Title: NCW101 [electronic resource]: an introduction to network centric warfare / Carlo Kopp. Edition: 1st ed. ISBN: 9780980550603 (pdf) Notes: Includes index. Bibliography. Subjects: Information technology--Military aspects. Communications, Military. Computer networks. Military art and science. Information technology--Military aspects. **Dewey Number:** 355.07

Air Power Australia – Australia's independent Defence think tank Air Power Australia Website – http://www.ausairpower.net/ Air Power Australia Analyses - Australia's First Online Journal Covering Air Power Issues Air Power Australia Analyses - ISSN 1832-2433 This book is dedicated to my colleagues in the computer science and engineering professions, who have changed our world so profoundly over the last four decades. Without their creativity, and persistent and dedicated effort, there would be no Network Centric Warfare, or indeed an Internet and networked world.

NCW101 AN INTRODUCTION TO NETWORK CENTRIC WARFARE

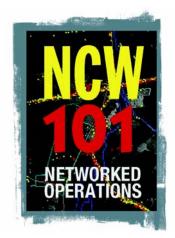

Table of Contents

Preface

NCW 101 Part 1 Information and Why It Matters NCW 101 Part 2 Digital Datalinks and Networks NCW 101 Part 3 JTIDS/MIDS NCW 101 Part 4 Ad Hoc Networking NCW 101 Part 5 Optical Imaging Sensors NCW 101 Part 6 Thermal Imaging Sensors NCW 101 Part 7 Synthetic Aperture Radar NCW 101 Part 8 Ground and Maritime Moving Target Indicator Radar NCW 101 Part 9 TCP/IP Networking Protocols NCW 101 Part 10 Satellite Communications in NCW NCW 101 Part 11 Pseudolites and Stratospheric Relays NCW 101 Part 12 GPS in Networked Systems Part 1 NCW 101 Part 13 GPS in Networked Systems Part 2 NCW 101 Part 14 Fundamentals of Information Warfare NCW 101 Part 15 Information Warfare vs ISR Systems NCW 101 Part 16 Information Warfare vs Networks NCW 101 Part 17 Data Mining and Knowledge Discovery Techniques NCW 101 Part 18 Geolocation of Radio Frequency Emitters NCW 101 Part 19 Information Warfare and Deception NCW 101 Part 20 Why NCW is Not a Panacea **Network Centric Warfare** The Capability of a Networked System Network Centric Warfare: Buzzwords, Bytes and the Battlespace Network Centric Warfare in the Land Environment Smart Tankers: Hubs in the Networked Force Radio Frequency Spectrum Congestion – Emerging Headache for NCW **Knowledge Warfare ISR during Operation Iragi Freedom GIS/ISR** Fusion on the Battlefield Hard Kill Counter-ISR Capabilities Proliferate **Bibliography and References** Index About the Author – Air Power Australia – Defence Today

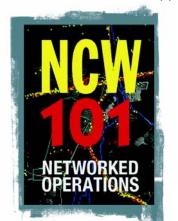

Preface

Networking is the defining paradigm of this time, for better or for worse. It has brought us unprecedented global connectivity, and extended the potency of all digital media. We now live in a largely digital world, where computers and digital networks pervade most aspects of life – one might argue too many.

Inevitably all technologies end up being applied sooner or later to the business of war, and it is no different with networking. Whether the label is *"Network Centric Warfare"*, *"Network Enabled Operations"* or *"Сетецентричная Война"*, the idea is very much the same, which is to use digital networks to link embedded and other computers in military systems. The most basic aim is to accelerate the operational tempo to the detriment of an opponent.

In the military domain, in every respect. While it can operational tempo sought by its difficulties ranging from single through radio propagation not coping with the deluge of

This book is a compilation of all nine related technical essays, *Defence Today* journal between paper dealing with quantitative military systems.

networking is a double edged sword and often does provide the gains in users, it introduces a myriad of point of failure vulnerability, breakdowns, to personnel simply data produced by such systems.

twenty parts of the NCW101 series, all published in Strike Publications' 2003 and 2008, and one research capability modeling of networked

The NCW101 series was produced with the intent of providing an accessible series of technical primers or tutorials for beginners in this area, the scope covering the whole gamut of digital networks, datalinks and communications technologies, the digitised Intelligence, Surveillance and Reconnaissance sensors feeding the network, and the full spectrum of Information Warfare applied against the sensor, network and operator.

Most of this material was written at an undergraduate level, with a qualitative rather than quantitative focus to maximize its accessibility and footprint. The book is suitable as an introductory text for both undergraduate and postgraduate students, as well as military staff college courses.

This text includes an extensive bibliography of related reference materials, intended to provide both professional readers and students of military networking with an accessible list of reading material.
